MGFX SUPPORTED

Compatibility

MG-FX with DesktopVK Profile

Yotsuba Framework supports MonoGame effects compiled with the **DesktopVK profile**, allowing existing MGFX shaders to run on Apple platforms through the Metal backend.

Keep using the familiar **MGCB / MGFX pipeline** and your existing .fx workflow, while Yotsuba handles the platform-specific graphics backend underneath.

Yotsuba Framework

“Metal Backend without intermediaries”

Main Feature

Compute Shaders

Yotsuba Framework extends the familiar XNA programming model with modern **GPU compute** capabilities. Run massively **parallel workloads** directly on the GPU for advanced effects, particle simulations, procedural generation, image processing, lighting, physics calculations, and other **compute-intensive tasks** — all while keeping the simplicity and structure developers expect from an XNA-style framework.

Yotsuba Framework

“Metal Backend without intermediaries”
